

PLANT MASTER MODEL M-600

This machine was designed to provide sweet potato growers an economical means to cut sweet potato plants from the plant beds with a minimum amount of labor. With its, unique flighting system and ground shaving cutter bar, the M-600 cuts the plants and lays them back on the bed in an orderly, neat fashion. Workers can then easily and quickly box the plants. This machine is a real labor saver and should not be overlooked by a commercial sweet potato grower.
